

Vactora *Plus*

Ingredients

Water stabilizing agents, dye, excipients.

Indications

Vactora Plus eliminates the materials in water that can be hazardous for vaccine and improves the quality of water. Blue dye provides visual assurance that the stabilizer has been properly mixed. In addition, the number of vaccinated animals can be monitored and vaccination can be evaluated by means of the dye.

Water stabilizing agents in **Vactora Plus**, neutralize the harmful effects of chlorine in tap water, for vaccine.

Vactora Plus also binds other harmful materials for vaccine in water like cations and heavy metals with its special neutralizing agents.

Vactora Plus helps to provide appropriate water quality for vaccination by regulating PH.

Directions for Use

- ❖ Calculate the necessary amount of water for vaccination and add 1 package of **Vactora Plus** per 100-lt water.
- ❖ Mix thoroughly.
- ❖ Add the vaccine in to that mixture.

Evaluation of Vaccination

After vaccinated water is completely consumed, evaluate the vaccination by checking the coloring on beaks, tongues and corps of randomly chosen poultry.
